

THE CLAIMS DEFINING THE INVENTION ARE AS FOLLOWS:

- 5 1. A display device including:
 - a first member including a tabletop provided with a transparent portion;
 - a second member arranged to cooperate with the first member to define an interior space for holding an article to be viewed through the transparent portion; the first and second members are arranged to be selectively engaged together or disengaged by way of lockable operating means, the operating means being operable from a position outside the interior space.
- 10 2. A display device according to claim 1 wherein the first and second members engage together by way of two opposed retaining means.
- 15 3. A display device according to claim 2 wherein each retaining means includes a flange and a mating aperture and at least one of the flanges is movable between an engaged and a disengaged position.
- 20 4. A display device according to claim 3 wherein each flange is disposed on the second member and each recess is disposed on the first member.
- 25 5. A display device according to claim 4 wherein the flanges face outwardly from one another.
6. A display device according to claim 1 wherein the operating means includes a rotary lock barrel which is arranged to rotate a cam.
- 30 7. A display device according to claim 6 wherein rotation of the cam causes lateral movement of a locking bar upon which one of the flanges is disposed.

8. A display device according to claim 3 wherein each flange is engageable with either recess.
9. A display arrangement including:
 - 5 a tabletop having an interior space for holding an article;
 - the table top includes a transparent portion allowing viewing of the article;
 - the article including an information bearing sheet and a three dimensional object;
10. the information bearing sheet includes a cut-out portion through which the object may be viewed.
10. A display arrangement according to claim 9 wherein the object is a product and the sheet bears information relating to that product.
- 15 11. A display arrangement according to claim 9 wherein the display arrangement includes a supporting means including a flat portion for supporting the sheet, and a depressed portion for supporting the object.
12. A display arrangement according to claim 11 wherein
20 the supporting means is biased towards the transparent portion.
13. A display arrangement according to claim 12 wherein the supporting means is biased by compressible material.
- 25 14. A display device according to claim 11 wherein the supporting means is in the form of a removable tray.
15. A display device according to claim 1 when used in a display arrangement according to claim 9.
16. A display arrangement according to claim 9 including
30 a display device according to claim 1.
17. A tabletop for use with a display arrangement, the tabletop having a transparent portion through which an article may be viewed and two opposed recesses

that allow engagement of the tabletop to a fixed support.

18. A base portion for a display arrangement, the base portion including a base plate provided with two outwardly facing flanges that allow engagement of an overlying tabletop member, at least one of the flanges being movable to selectively engage or disengage the overlying tabletop member.
